

Experiment Script

1. Purpose

This document is a facilitator guide with participant-facing spoken lines.

It is written in simple, easy-to-read English so the facilitator can read most lines directly to the participant.

This script assumes:

- a within-subject study
- 4 conditions per participant
- condition order is counterbalanced with a Latin square
- the base order for counterbalancing is `Macro Near -> Macro Side -> Micro Near -> Micro Side`
- each condition includes `Placement`, `Rotation`, and `Scaling`
- each phase currently uses `2 tools` in the workflow

Important note:

- If the Latin square order is tied to `Participant ID`, the ID should include a number such as `P01`, `P12`, or `P24`.
- In the current code, the numeric part of the `Participant ID` is what can be used to determine the sequence.

2. Facilitator Summary

Each participant completes all four conditions.

For each condition:

- the participant matches the required posture
- the participant triple taps to begin the condition
- the system may show a short practice before a task phase
- the participant completes `Placement`, `Rotation`, and `Scaling`
- each phase is completed for `2 tools` in the current workflow
- the participant then completes a short between-condition questionnaire

Core participant rules:

- `Triple tap` submits the current attempt.
- In `Macro`, the participant mainly uses larger arm and hand movements.
- In `Micro`, the participant should keep the arm as still as possible and use phone swipes.
- After the participant triple taps to begin a condition, the system briefly checks phone connection and stillness before the task starts.

3. Before The Session

Facilitator checklist

- Prepare the headset, phone, and study computer.
- Prepare the consent form.
- Prepare the demographic questionnaire.
- Prepare the between-condition questionnaire.
- Prepare the final questionnaire.
- Prepare the debrief sheet.
- Prepare the participant compensation form, if needed.
- Confirm the participant's counterbalanced condition order.
- Assign a **Participant ID** with a numeric part.
- Confirm that the phone app is available and the QR workspace setup is ready.
- Check the basket and tool locations in the workspace.
- Confirm that the session starts from the participant ID screen.

Suggested system check

Before the participant arrives, confirm:

- the start screen asks for **Participant ID**
- the runtime begins after QR scanning
- the phone connects correctly
- the posture example images are visible
- the phone can detect **triple tap**

4. Welcome And Consent

Facilitator

- Welcome the participant.
- Confirm their name and appointment.
- Ask whether they are comfortable continuing.
- Give the consent form.

Say

Hello, thanks for coming in today.

In this study, you will use a mixed reality system and a phone-based input method to complete object manipulation tasks.

Before we begin, please read this consent form carefully.

Feel free to ask questions at any time.

If you are happy to participate, please sign the form.

After consent

Say

Thank you.

Next, I will ask you to complete a short background questionnaire.

5. Demographic Questionnaire

Facilitator

- Give the demographic questionnaire.
- Wait until it is completed.
- Answer procedural questions, but do not explain the study hypotheses.

Say

Please complete this short background questionnaire.

Just let me know when you are done.

6. Study Overview

Say

In this study, you will complete the same types of tasks in several different conditions.

The conditions change how you control the system and where you keep your hand.

In every condition, your goal is to match the target as closely as possible.

When you are ready, you will submit your current attempt with a triple tap.

This is a within-subject study, so you will try all of the conditions.

The order is counterbalanced across participants.

Short version

You will do the same tasks in several conditions.

Please try to be as accurate as you can in every condition.

When you are ready to submit your current attempt, triple tap.

7. Device Setup

Facilitator

- Hand the phone to the participant.

- Confirm that the participant can hold it comfortably.
- Explain how to launch the phone app, if needed.
- Enter or confirm the assigned **Participant ID**.

Say

I will now give you the phone we use in the study.
Please hold it in a comfortable way.
We will start by entering your participant ID.

Facilitator note

On the start screen:

- the participant enters the assigned **Participant ID**
- the screen then continues to the runtime scene
- the runtime scene shows **Scan the QR code to begin.**

8. Start Of Runtime

Facilitator

- Ask the participant to scan the QR code when the runtime instruction appears.
- Confirm that the workspace is aligned correctly.

Say

Please scan the QR code to begin.
Once the workspace is ready, we will start the study conditions.

9. General Task Rules

Say

In every task, please try to match the target as closely as possible before you submit.
There is no separate start button for each task. Once the task begins, you can start right away.
When you are ready to submit your current attempt, please triple tap.
If a short practice appears, just follow the instruction on the screen. The practice is only for familiarization.

Say

Between conditions, you will have a short break and a short questionnaire.

If anything feels wrong, confusing, or uncomfortable, please tell me right away.

10. Condition Introduction

Facilitator

- Before each condition, remind the participant that the posture image on the screen is the reference.
- Do not rush the participant during posture matching.
- After the participant triple taps to begin the condition, wait for the system to complete the phone connection and stillness check.

Say

At the start of each condition, please match the posture shown in the image.

When your posture matches the instruction, triple tap to start.

After that, please hold still for a moment until the system is ready.

11. Condition Explanation Script

Use the relevant explanation before the participant starts each condition.

11.1 Macro Near

Say

In this condition, you will use macro control near your head.

Please keep your hand near your head, as shown in the image.

In macro control, you will mainly use larger arm and hand movements.

11.2 Macro Side

Say

In this condition, you will use macro control at the side of your body.

Please keep your hand at the side of your body, as shown in the image.

In macro control, you will mainly use larger arm and hand movements.

In this side condition, the movement mapping changes.

Up and down movement is remapped with forward and backward movement.

11.3 Micro Near

Say

In this condition, you will use micro control near your head.

Please keep your hand near your head, as shown in the image.

In micro control, try to keep your arm as still as possible and use phone input for fine adjustment.

11.4 Micro Side

Say

In this condition, you will use micro control at the side of your body.

Please keep your hand at the side of your body, as shown in the image.

In micro control, try to keep your arm as still as possible and use phone input for fine adjustment.

12. Task Explanation Script

Use these explanations before the participant begins the main experiment, and repeat them only if needed.

12.1 Placement

Say

In placement, move the tool so it is as close to the target position as possible.

Then triple tap to submit your current attempt.

Micro placement add-on

Say

In micro placement, tap once to grab and tap again to release.

Swipe left and right to move left and right.

Swipe up and down to move the tool.

You can double tap to switch the up-and-down swipe control between up-and-down movement and front-and-back movement.

12.2 Rotation

Say

In rotation, match the tool to the target rotation as closely as possible.

Then triple tap to submit your current attempt.

Micro rotation add-on

Say

In micro rotation, swipe left and right to adjust yaw.

Swipe up and down to adjust roll.

You can double tap to switch the up-and-down swipe control from roll to pitch.

12.3 Scaling

Say

In scaling, match the tool to the target size as closely as possible.

Then triple tap to submit your current attempt.

Micro scaling add-on

Say

In micro scaling, swipe up to make the tool smaller.

Swipe down to make the tool bigger.

13. Practice Script

Facilitator

- Let the participant follow the on-screen practice instruction.
- Do not over-explain unless the participant is confused.
- Remind the participant that practice is only for getting familiar with the control.

Say

You may see a short practice round before a task phase.

During practice, just get familiar with the control.

When you are done with the current practice round, triple tap.

When practice ends

Say

The main task starts now.

14. Main Trial Script

Say

Please do your best to match the target as closely as possible.

When you are ready to submit your current attempt, triple tap.

If the participant submits too early

Say

Please try to get as close as you can before you triple tap.

If the participant seems unsure about the goal

Say

The goal is not just to get close enough.

Please try to match the target as accurately as you can, then triple tap when you are ready to submit.

15. Between-Condition Questionnaire

Facilitator

- At the end of each condition, give the participant the between-condition questionnaire.
- Keep the wording consistent across conditions.
- Do not compare the current condition to later conditions out loud.

Say

That condition is now finished.

Please take a short break.

While you rest, please complete this short questionnaire about the condition you just used.

If needed

Say

Please answer based only on the condition you just completed.

16. Final Questionnaire

Facilitator

- After all four conditions are complete, give the final questionnaire.
- Ask for overall preference, comfort, workload, confidence, and any open comments.

Say

You have now completed all of the study conditions.

Please complete this final questionnaire about your overall experience.

You can also share any comments about what felt easy, difficult, comfortable, or confusing.

17. Debrief

Say

Thank you for completing the study.

This study compares different input conditions for object manipulation tasks in mixed reality.

We are interested in how the different conditions affect performance and user experience.

If you have any final comments or questions, I would be happy to hear them now.

18. End Of Session

Facilitator

- Collect the phone and any study materials.
- Confirm that all forms are complete.
- Confirm that the data was saved.
- Provide compensation, if applicable.
- Thank the participant.

Say

Thank you again for your time and participation.

19. Troubleshooting Lines

Use these only when needed.

If QR scanning does not work

Please give me one moment while I reset the workspace alignment.

If the participant forgets the condition start step

Please match the posture shown in the image, then triple tap to start the condition.

If the participant moves too much right after the start triple tap

After you triple tap to start, please hold still for a moment until the system is ready.

If the participant asks when to triple tap during a task

Triple tap when you feel your current attempt is as close to the target as you can make it.

If the participant asks whether the practice counts

No. The practice is only for familiarization. The main task comes after the practice.

20. Facilitator Quick Reference

- Study type: within-subject
- Base order for counterbalancing: Macro Near -> Macro Side -> Micro Near -> Micro Side
- Condition start: match posture image, then triple tap to start
- After condition start: participant should hold still briefly
- Main submit action: triple tap
- Current workflow per condition: Placement -> Rotation -> Scaling, with 2 tools per phase
- Participant ID should include a number if the Latin square sequence is linked to the participant ID
